

Abrasive pill

Application range of zinc wire cut pill:

Grinding balls in manufacturing and raw material selection, there are obvious advantages over other products, it has high manganese steel characteristics, while grinding steel balls have no holes, no cracking, coupled with the balanced hardness of grinding balls, in comparison, other products such as steel wire cut balls, cast steel balls, poor toughness, short life, high cost, relatively small scope of application; Some of the above advantages are sufficient to show that grinding steel balls are much stronger than other projectile products.

In short, to achieve the most ideal surface cleaning results, grinding steel balls are the product of choice.

Size 6-80 (mesh) Applicable surface treatment, strengthening

The new medium carbon and high carbon steel wire is cut and ground. Compared with the cast steel ball, it has long life, less dust, consistent size, short shot blasting time, which can achieve surface oxidation, surface strengthening treatment, finishing, paint removal, corrosion removal, dust-free shot blasting, and the metal color on the surface of the solid workpiece is prominent. Widely used in auto parts, springs, aviation parts, gears and other surface strengthening cleaning effect is outstanding

The life of the top of the grinding ball is more than 2 times that of the national standard steel ball, and there is no crushing rate

Grinding pill: grinding pill, passivated steel wire cut pill, reinforced steel pill

Grinding balls of the specifications of the range of 0.6#, 0.8#, 1.0#, 1.2#, 1.4#, 1.7#, 1.8#, 2.0#, 2.4#.
